masters®
LIFE IN ACTION 

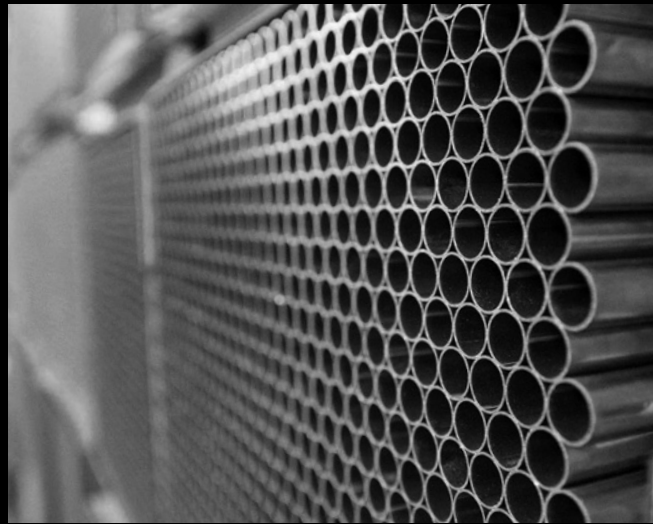

FOUR DECADES
OF EXPERIENCE
AND EVOLUTION

MASTERS - from the beginning in February 1977 - hardly believes in innovation, in technology and know-how, in safety and reliability; it also believes in creativity, in the respect for environment and in the strength of its team. Proud to produce quality poles for every kind of activity that requires the use of these accessories: alpine ski, cross-country ski, trekking&hiking, walking&trail running, nordic walking.

MASTERS, dal febbraio 1977, crede nell'innovazione, nella tecnologia, nella sicurezza; crede anche nella creatività, nel rispetto dell'ambiente e nella forza del gruppo che insieme collabora per la creazione delle collezioni. Orgogliosi di produrre bastoni di qualità per ogni sport che richieda l'utilizzo di questo accessorio: sci di discesa (alpino, freestyle, telemark), sci di fondo, trekking, hiking, trail running, walking e nordic walking.

RAPAX

"Touch Different"

DESIGN

New captivating and aggressive shape, designed and developed internally by Masters.

Nuova forma accattivante ed aggressiva, disegnata e sviluppata internamente da Masters.

ERGONOMY

Original design with special edges, curves and holes to reach the best lightness.

Design originale con particolari curvature, profili ed aperture per raggiungere la maggior leggerezza possibile.

COMFORT

"Soft touch" rubber in two components and a particular texture for a better grip and comfort.

Gomma morbida in due componenti e rifinitura particolareggiata per una migliore presa e comfort.

Design project developed by Masters. Inner structure reinforced to guarantee flexibility and grip at the same time.

GRYPHON

Progetto di design realizzato da Masters. Struttura interna rinforzata per garantire allo stesso tempo flessibilità e tenuta.

TECHNOLOGY

CALU® TECH

WORLDWIDE EXCLUSIVE

Calu® is the answer to the request of lightness, strength and bending (tensile strength test achieves the result of 70 Kg/meter).

It is composed by a core of aluminum alloy 7075 F56 and rolled up by the most superb quality of woven carbon. This combination assures safety and high performances over the time. Besides, unlike a full-carbon tube, bi-material CALU® is able to absorb diametrical forces. The product is environmentally safe as free of heavy metals and polycyclic aromatic content (PCA) as often found in carbon or carbon composite materials.

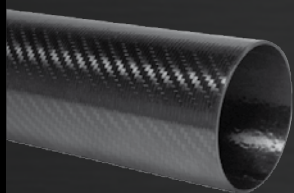

Calu® è la risposta alla richiesta di leggerezza, resistenza e flessibilità (test di tenuta hanno raggiunto un risultato pari a 70 Kg/metro).

Composto da un cuore in lega di alluminio 7075 F56 e rivestito dalla miglior fibra di carbonio.

Ciò assicura durabilità e sicurezza a livelli elevati. Inoltre, a differenza dei tubi realizzati totalmente in carbonio o con una percentuale di esso, il bi-materiale CALU® è capace di contrastare i colpi diametrali.

Il materiale rispetta l'ambiente, perché totalmente privo di piombo e altri elementi dannosi spesso ritrovati nel carbonio e nei materiali composti.

CARBON

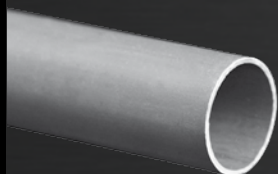

Carbon tubes are made with a high percentage of carbon instead of resin and its tightly texture along the section is easily visible to the naked eye. Carbon fiber permits a perfect balance between best swing and light weight for a professional use of the poles. Carbon shafts are checked and tested internally our Company to guarantee an extreme use of our poles.

I tubi da noi utilizzati sono realizzati con un'alta percentuale di carbonio e non di resina. In sezione, infatti, le numerose fibre di carbonio formano un fitto intreccio visibile ad occhio nudo e non un semplice composto verosimile al vetro. Il carbonio permette un ottimo bilanciamento tra oscillazione e leggerezza per un uso professionale. I tubi in carbonio vengono selezionati e controllati in azienda al fine di garantire l'uso del bastone soprattutto in estreme condizioni di sforzo.

SHAFT	CARBON	CARBON FIBER / WEAVE DIRECTION
100% CARBON	HIGH MODULUS CARBON (30T / 218) 3k	ORTHODROMIC AND REVERS FIBER
80% CARBON	HIGH MODULUS CARBON (30T / 218) 3k	ORTHODROMIC AND REVERS FIBER

100% GLASS FIBER	GF 218 #	ORTHODROMIC FIBER

ALUMINUM ALLOYS

High quality and long duration are our goals: from these points start every choice we make.

Most part of Masters collection is made in aluminum alloy 7075 F56: low-density, malleable (at any temperature), high tensile strength and corrosion resistance thanks to special processes.

Aluminum alloy 5083 F45 is the one used for basic models or single sections of telescopic poles, combined with sections in aluminum alloy 7075.

Extruded tubes are successively quenched and artificially aged: manufacturing is made in Italy and each tube is checked by exclusive and automatic machines and by the ability of our technicians. Aluminum is 100% recyclable.

Elevata qualità e durata nel tempo sono i nostri punti fermi: da qui inizia ogni scelta che affrontiamo.

Per gran parte della collezione Masters, utilizziamo la lega di alluminio 7075 F56: bassa densità, elevata duttilità (a qualsiasi temperatura), resistenza alla rottura e alla corrosione grazie a speciali trattamenti.

In alternativa, la lega di alluminio 5083 F45 è una lega utilizzata per i modelli basici o in singole sezioni in combinazione con sezioni in lega di alluminio 7075.

I nostri tubi estrusi sono successivamente temprati e invecchiati artificialmente: tutte le operazioni sono svolte in Italia e ogni tubo viene controllato da esclusive macchine automatiche e dalla capacità ed esperienza dei nostri tecnici. L'alluminio è 100% riciclabile.

PLASTIC PARTS

All plastic materials are thermal shock resistant to weather changes and frost: this is possible thanks to the excellent overall performance of engineering polymers at sub-freezing temperatures.

DuPont® materials guarantee their performances to -50° C and up to +40° C.

Tutte le plastiche presenti nei nostri prodotti resistono a qualsiasi shock termico dovuto a cambiamenti climatici repentini o al gelo. Questo grazie all'efficacia e alla resistenza del materiale garantito a temperature al di sotto dello zero. Infatti, i materiali DuPont® garantiscono le loro prestazioni fino a -50°C e ben oltre i +40°C.

MR CLICK GLOVE

The comfortable and enveloping glove is equipped with a clip made with the best DuPont® plastic to resist to extreme weather conditions and ensures always good performances. The clip fits easily in Gryphon dedicated grip and it fasten strongly. Only the pressure of the thumb on the top of the grip will release the glove and let the hand free from the stick.

Il comodo e avvolgente guantino è dotato di una clip realizzata con la miglior plastica DuPont® per resistere a condizioni metereologiche estreme e garantire sempre un'ottima prestazione. La clip si inserisce facilmente nella manopola Gryphon dedicata, fissandosi con resistenza. Solo la pressione del pollice sulla parte superiore della manopola potrà sganciare il guantino per liberare la mano dall'ingombro del bastone.

AUTOMATIC STOP SYSTEM

By using a unique patented Automatic Stop mechanism, this strap ensures safe and performance. The automatic strap is simple to adjust and easy to lock in the correct and most comfortable position. Furthermore, in case of falls, the strap automatically unlocks freeing the hand and avoiding possible injuries to the wrist.

Il passamano, utilizzando un sistema brevettato unico nel suo genere, garantisce la massima sicurezza e un'ottima prestazione. Il passamano è facile da regolare e semplice da fissare nella corretta e più confortevole posizione. Inoltre, in caso di caduta, il passamano si sgancia automaticamente liberando la mano ed evitando così possibili traumi ai polsi.

CLAMPER BLOCKING SYSTEM

Clamper system allows users to adjust pole length quickly and simply without tools, only screwing the cog with fingers. The external system is really lightweight, thanks to a compact and slim shape; available in different colors to match with the design of the poles.

Il sistema di chiusura *Clamper* permette una regolazione rapida e semplice senza l'uso di utensili, ma solo ruotando la rotellina con le dita.

Questo sistema esterno è davvero leggero, grazie alla forma compatta e sottile della leva; disponibile in diversi colori per abbinarsi alle grafiche dei bastoni.

RBS

The patented *Replacement Basket System* RBS enables the user to fix easily and quickly the most suitable basket during your trails: basket ø 55mm for frozen snow and stony trekking, baskets ø 95mm and ø 120mm for powder snow.

The special materials used to produce our baskets guarantee durability and efficiency in all atmospheric conditions.

Il sistema brevettato *Replacement Basket System* RBS permette di sostituire la rotella più adatta al terreno su cui ci si avventura in maniera semplice e veloce: quella da ø 55mm per neve ghiacciata e sentieri sassosi, quelle da ø 95mm e ø 120mm per la neve fresca.

Le plastiche speciali utilizzate nella produzione delle nostre rotelle garantiscono durabilità ed efficienza con qualsiasi condizione atmosferica.

A long lasting project, made up of relationships, friendship, passion for the sport and especially for the mountain.

And much more.

For a long time, Masters worked on the idea of creating a small team of experts able to assist the Company's nascent concepts: made unique products without false promises.

Because "the biggest obstacle we can find is what we put in ourselves". This claim well represents all the athletes who Masters wants at its side.

We thanks our team for the photos used in our Catalogue.

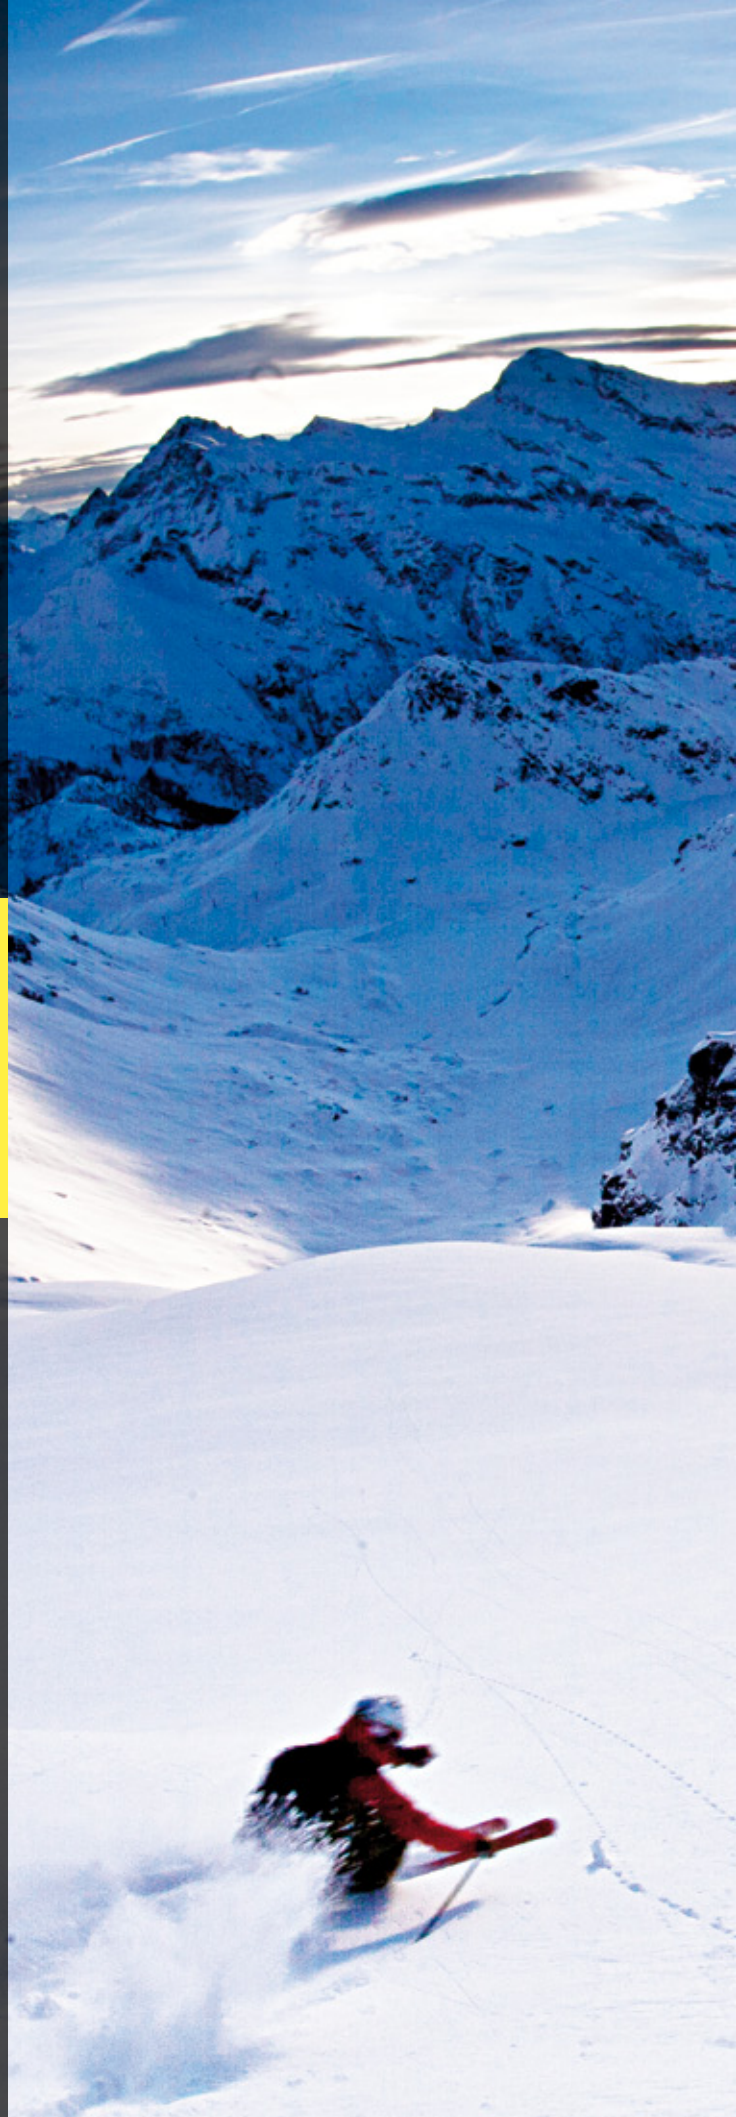

PRO TEAM

Project

Un lungo progetto fatto di relazioni, amicizia, passione per lo sport e soprattutto per la montagna. E molto di più.

Da tempo ormai, Masters lavorava all'idea di creare un piccolo team di professionisti capaci di affiancare le idee nascenti dell'azienda: realizzare prodotti unici senza false promesse. Perché "l'ostacolo più grande che possiamo trovare è quello che poniamo in noi stessi". E questo claim ben rappresenta tutti gli atleti che Masters vuole al suo fianco.

Ringraziamo il nostro team per le foto utilizzate nel nostro catalogo.

CARLALBERTO CIMENTI (Mountaineer)

"Failures should be the motivating force to achieve your aim and arrive to the destination."
"Le delusioni devono essere ragione di motivazione per raggiungere l'obiettivo e arrivare alla meta."

MARCO ZAFFARONI (Mountaineer)

"When you reach the summit, you are great or lucky. On the other hand, you might have thousand of explanations, but they'll be always useless."
"La cima, se la porti a casa, sei stato bravo o fortunato. In caso contrario puoi avere anche mille giustificazioni, ma saranno sempre tutte inutili."

MATTEO CALCAMUGGI (UIAGM/IFGMA International Mountain Guide)

"The perfect curve for the ones who glides on the snow as I do, naturally exuberant, is my main goal."
"La curva perfetta per un libero scivoltore come me, irrequieto per natura, è il mio obiettivo."

SAS (Snowsports Academy San Marino)

"Many ski instructors linked by a common goal: the quality of our work."
"Tanti istruttori di sci uniti da un obiettivo comune: la qualità del nostro operato."

A rental product has to be strong to face its frequent use: that's why we present a model in carbon 5% reinforced. To help the rental service staff to find easily the appropriate size, each size is painted in a different color.

Un prodotto rental deve essere particolarmente resistente per affrontare l'usura a cui viene sottoposto: ecco perché abbiamo utilizzato tubi in carbonio 5% rinforzato. Le misure sono distinte con serigrafie colorate per facilitarne il riconoscimento.
